- Specific Fixes and Corrections** **6**

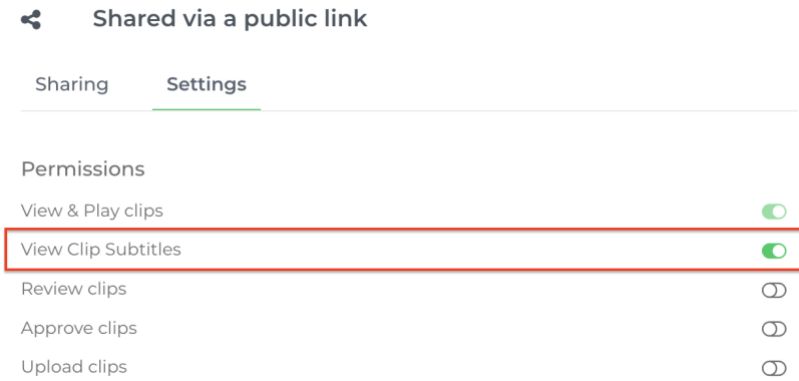

## Introduction

Limecraft’s sixth release of 2024 (2024.6) is scheduled for delivery to Limecraft’s online platform on 17th September, and introduces the following set of new and extended functions, improvements and specific corrections.

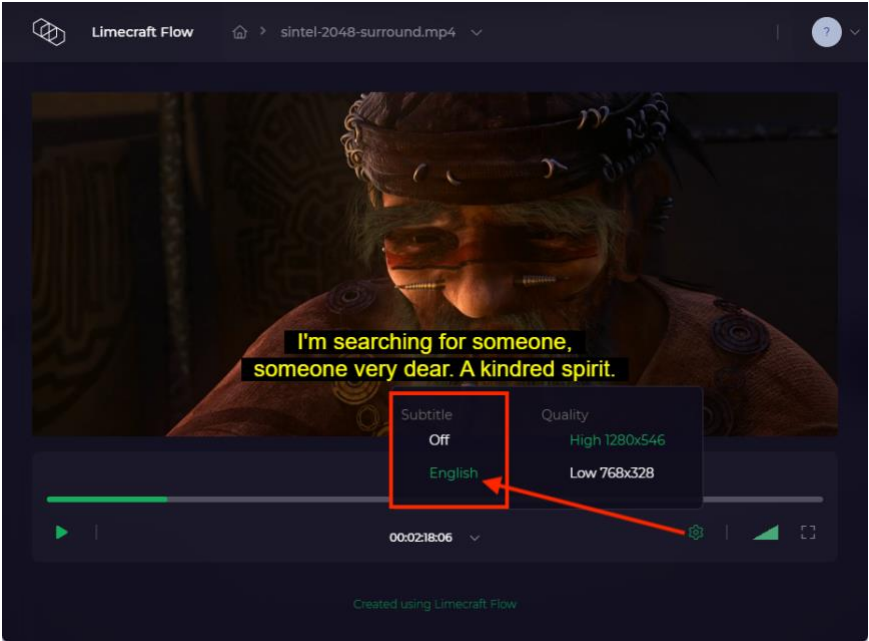

# New and Extended Features

## Subtitles in shared links

When sharing video content with your collaborators, it is now possible to enable viewing of subtitles that have been generated for that content as part of the share configuration.

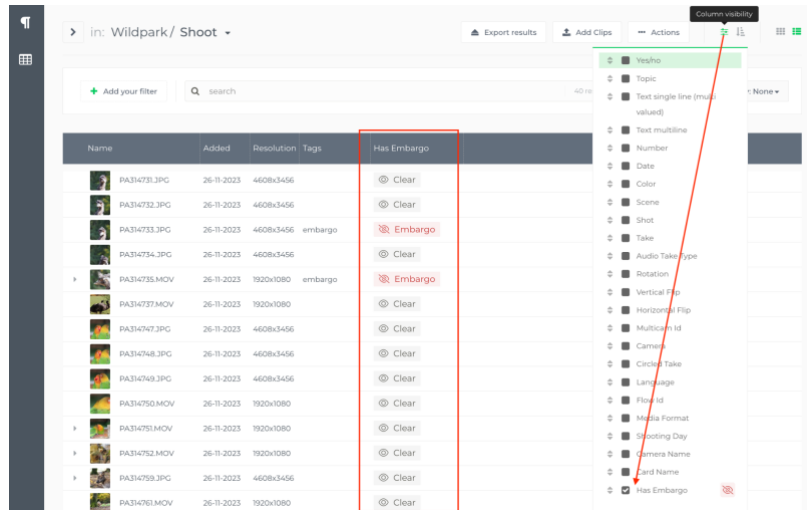

The recipient of the shared content can then choose to view the subtitles when playing the content.

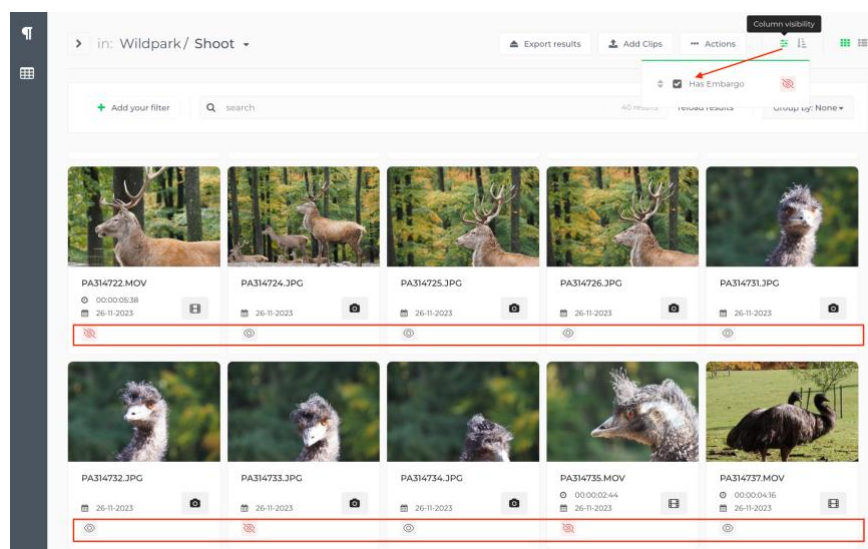

## Custom statuses

With this release, it is now possible to define and display custom status information for the content in a specific workspace. Examples of such custom statuses can include indicating whether content has been archived or not, or flagging more sensitive content.

Such custom statuses can then be included in the list view for the clip library:

In the thumbnail view for the clip library, these custom statuses can be displayed as an icon on the thumbnail for each clip:

Tip: Custom statuses can also be used as part of filters on the clip library overview.

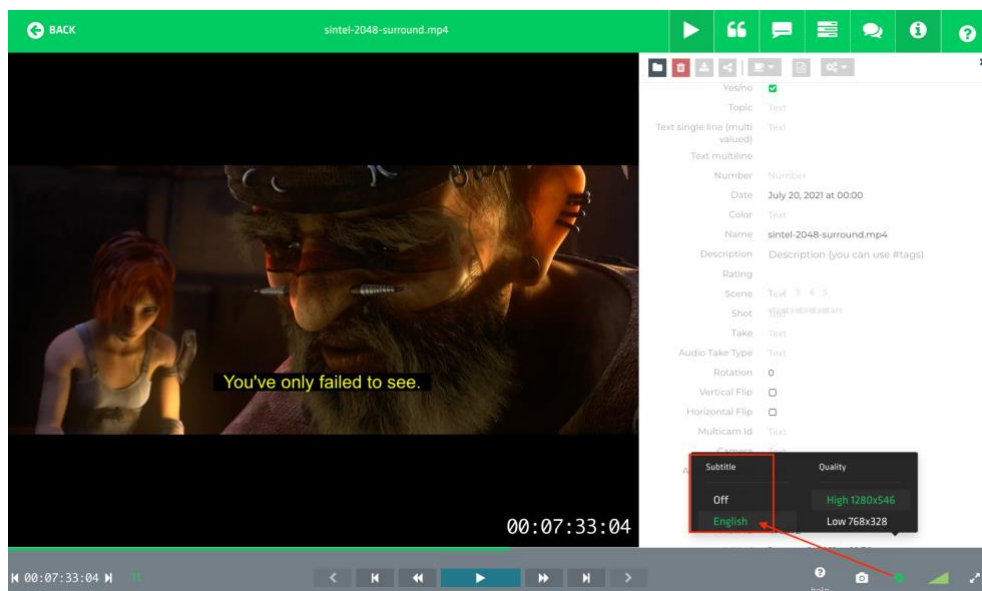

# Enhanced Functionality

## Subtitle controls in Limecraft

The player in the Limecraft application now allows corresponding subtitles to be turned on/off using the player settings:

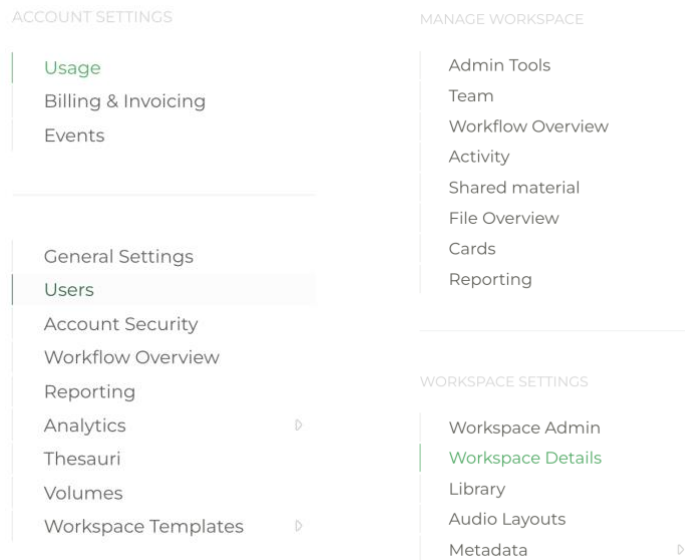

The ability to turn on/off corresponding subtitles is also available when viewing clip details:

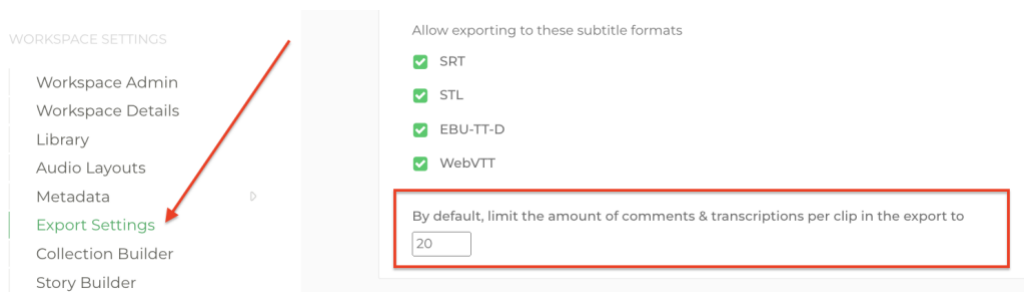

## Additional enhancements

- A slimmer design has been applied to the left navigation menu for account and workspace settings.

- (NL-6734) When exporting metadata for clips, the default limit for number of comments and transcriptions per clip can now be adjusted

- (NL-6826) The embeddable player now supports rotation, horizontal flip and vertical flip.

## Specific Fixes and Corrections

- (NL-6795) The account overview page will no longer reflect an incorrect status 'UNLINKED'
- (NL-6783) The issue where a refresh-workaround operation was required to make the subtitle rendering function available on eligible accounts for all users, is now resolved.
- (FSC-2170) Login with Flow from Edge will no longer redirect to the login page when already logged into Flow as a member of the account Edge is licenced to.
- (NL-6752) Subtitle export in STL-format will now properly maintain color and position markers.
- (NL-6746) Using the 'join' function to participate in a workspace you have been invited to is now possible from the workspace list overview (in addition to the grid overview)
- (NL-6728) The specific issue where different values were shown for the same clip field due to an outdated index is now resolved.
