Introduction

Limecraft’s seventh release of 2024 (2024.7) is scheduled for delivery to Limecraft’s online platform on October 29th 2024, and introduces the following set of new and extended functions, improvements and specific corrections.

New and Extended Features

Collection Support in Limecraft Panel for Adobe Premiere

Earlier versions of the Limecraft panel displayed items in the panel as a flat list, the most recent on top. For users operating larger collections, the Limecraft Panel for Adobe Premiere now lists the collections and subcollections of a workspace, along with actions to create and edit (sub)collections, and a breadcrumb navigator.

Overview of Files in a Workspace

With this release, workspace administrators can access a 'File Overview' page from the Workspace Settings menu, to search on all file content using an extensive set of filters.

The screenshot displays the 'File Overview' page in the Limecraft workspace. The interface includes a top navigation bar with 'ACCOUNT Acme Corp' and 'Productions / Demo Production'. A left sidebar contains 'Workspace' and 'MANAGE WORKSPACE' options like Team, Workflow Overview, Activity, Shared material, File Overview, Cards, and Reporting. Below this is 'WORKSPACE SETTINGS' with options like Workspace Details, Library, Audio Layouts, Metadata, Export Settings, Collection Builder, Story Builder, Screenplay Builder, Review, Transcriber, and Subclips.

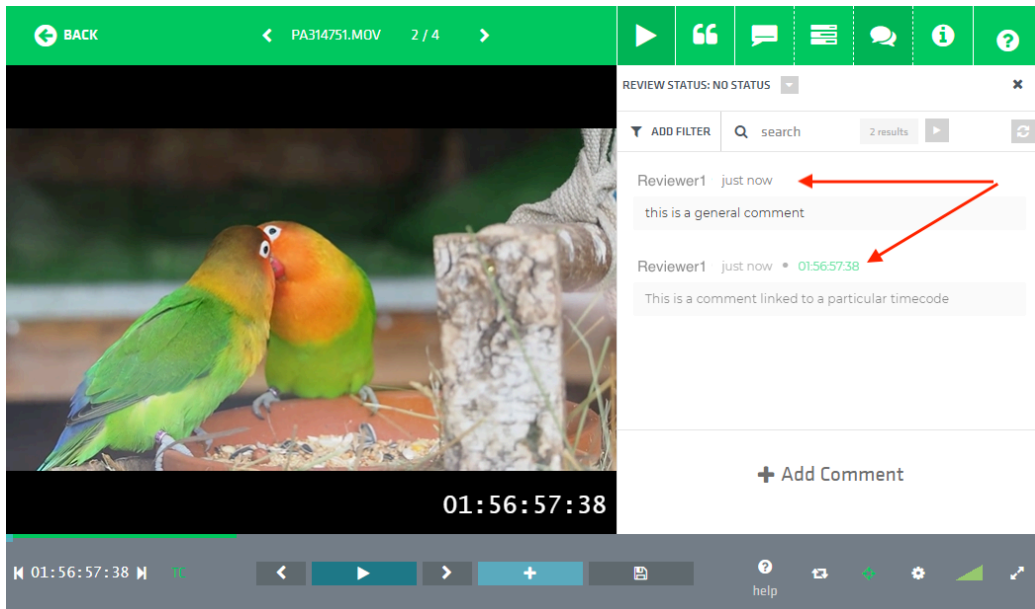

The main content area shows a search bar with '67 results' and filters for 'Instance quality: HIGH', 'Instance type: RAW', and 'Clip type: VIDEO'. A table lists clips with columns for Clip name, Clip Id, Clip type, Instance, and Metadata. A search dropdown menu is open, showing results for 'nas' including 'NAS BACKUP A' and various backup details.

Clip name	Clip Id	Clip type	Instance	Metadata

Enhanced Functionality

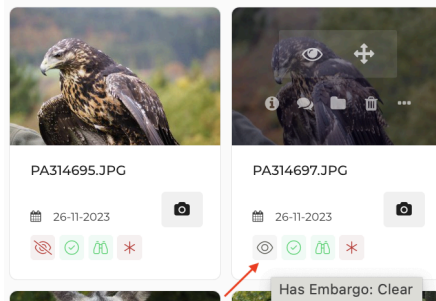

General Comments

With this release, the Limecraft Review Application now supports the creation of general comments, i.e. such comments are not tied to a particular timecode of the media being reviewed.

Additional enhancements

- (CP-304) Support timecode extraction from SEI messages in H264 video during ingest
SEI messages are a special parameter that is specified for H. 264 and H. 265. SEI message may be used to specify how the frame should be displayed. To make sure subtitling import and confirm functions work as expected, we included interpretation of SEI messaging.
- (NL-6905) Hovering over a custom status indicator now shows a tooltip containing the label defined for that status.

Specific Fixes and Corrections

- (NL-6854) The use of custom status in filters is now more properly supported
- (NL-6863) Existing quick views are again properly available
